

## Prescription Information

**Caution:** Federal Law (USA only) restricts this device to sale by, or on the order of a licensed health care practitioner. Outside of the USA it is available worldwide without a prescription but consultation with a qualified healthcare professional is recommended.

**Indications:** Alpha-Stim® 100 is an effective treatment with broad applications for a variety of syndromes involving pain, and for the management of anxiety, depression, and/or insomnia, or for the short term relief of the symptoms of pain, anxiety, depression and/or insomnia. In many cases it is the sole therapeutic method required. Effective results in pain management have been seen during and/or subsequent to stimulation over affected body parts, adjacent areas, and areas distant from those in pain. As with any therapeutic intervention, not all animals will respond to Alpha-Stim® 100. The degree of efficacy will vary with the nature of the problem being treated, the overall health of the animal, and with the method of treatment.

**Contraindications:** Do not stimulate directly on the eyes or over the carotid sinus.

**Adverse Effects:** Adverse effects are usually mild and self-limiting. Adverse effects seen in approximately 4,541 human patients in controlled, open, uncontrolled conditions, and by physician survey and reasonably associated with the use of CES are dizziness (6 cases, 0.13%), skin irritation/electrode burns (5 cases, 0.11%), and headaches (9 cases, 0.20%). Prolonged CES treatment at higher than necessary currents may cause dizziness or nausea that can last from hours to days. Paradoxical reactions such as hyperexcited states, increased anxiety, and sleep disturbances may occur, but are extremely rare.
